When a large amount of power is suddenly needed, the amplifier can respond extremely quickly without raising the noise floor and thus degrades the signal-to-noise ratio.. Hz, known as the audio CD standard, was selected as the best compromise between quality and file-size, while adequately covering hearing range of human ears.. Digital audio media that is above 16-bit/44.1kHz is classified as High-Resolution Audio.. The higher the number of bits, the closer the audio file is to the original sound.
