Photoshop CS6 has the Pantone color matching feature. Learn more about how to make the most of this feature in Chapter 18. Introducing Photoshop Creative Cloud Photoshop CC (the current version of Adobe Photoshop) is an upgrade to Photoshop CS6. As such, you use the same fundamental tools — there's no major overhaul of the interface to lure you in — but you get a number of benefits that are worth the upgrade. Introducing Photoshop CC Photoshop CC is a subscription-based program that costs \$9.99 per month for individuals and \$19.99 per month for a small business. The price increases to \$19.99 per month for larger companies or \$29.99 per month for large organizations. It is a better value to buy the program rather than to lease it. You can purchase the program outright for \$699, and you can also subscribe to Creative Cloud for a long period for \$24.95 per month. I suggest that you go for the former, as you get all the benefits of subscribing for the longer period, but you pay more per month for the entire version. The price for working with the cloud is \$19.99 per month for the individual and \$44.95 per month for a small business. The price increases to \$49.95 per month for larger companies or \$299.95 per month for large organizations. However, the price is supposed to decrease in the future, as of mid-2015, and, according to the Adobe help site, the cost of individual licenses is planned to be \$74.99. In addition, you receive updates as they are released. Some updates are free, and others are not. You need to be careful when purchasing a subscription to which updates you subscribe. I suggest that you subscribe to those updates that you really need, like bug fixes. That way, you'll be protected from paying for something you don't need. When using Photoshop CC, you need to purchase and install the software on every computer you use. You can install it on your new computer as you purchase it, and if you purchase it from a store that's authorized to sell it, the store will install the program for you. One downside to the program is that although you can only share your images through Creative Cloud, you can't export your files to a print shop. You must email the print shop in the print process. You can use the Creative Cloud at your

[Read also: Best web design apps: A beginner's guide] In my opinion, the best Photoshop alternatives are the following: 5 Free Best Photoshop Alternatives to Photoshop 1. PhotoMaestro PhotoMaestro is a graphic design tool developed by Noldus Information Technology. It is a completely free app that allows you to create, edit, and share images. This alternative is geared to beginners, and the interface is simple and intuitive to use. What I like the most about this program is its ability to create really cool photo effects, collages, and images. Another great feature is that you can save your images to your device as a camera roll, or export them directly to Facebook, Instagram, Twitter, and other social media. The interface is very similar to photoshop, just a different

color scheme. If you need to work from a digital camera, you'll love PhotoMaestro. 2. Fotor This free photo editing app is fast, stable, and has a very intuitive interface. The only thing that is disappointing is the lack of a layer panel and that there are very few built-in filters. The editing tools are divided into four categories: Rotate, edit the color of an image, stretch to make it fit any size, or use the effects. If you want to make simple adjustments to your images and add a few filters, then Fotor is perfect for you. 3. Corel PaintShop Pro PhotoX6 Corel PaintShop Pro PhotoX6 (also known as Corel PaintShop PhotoX6) is a powerful, all-in-one photo editor that can be used for anything from simple image editing tasks to video creation. With a UI that is very similar to Photoshop, you won't feel lost. Its advanced tools and features make it a worthy option to consider if you are looking for a one-stop package. Corel PaintShop Pro PhotoX6's best features are its filters and tools, like the adjustment brush, curves tools, and the amazing selection tools. 4. Pixelmator Photo Pixelmator is a Mac desktop image editing application with an easy to use interface. It's an alternative to Adobe Photoshop. It allows the user to edit images, design web pages, and create graphics for iOS and Android apps. This tool is very easy to use and ideal for beginners, and 388ed7b0c7

From the blog RAC to replace lost data RAC has announced that it will replace lost data for pet owners from now on. Data that you have lost, and have not yet recovered will now be automatically recovered by RAC by scanning the missing data from a nationwide network of technology centres, a scheme that will begin from 1 May 2009. RAC spokesman Brian Whitaker says "This is a fantastic result for pet owners. RAC's data recovery service is second to none in the industry, but this new service will extend RAC's data recovery service to pet owners who have lost the most sensitive information about their pet." Previously RAC's Pet Supplies division would only be able to recover lost information for owners of RAC's Pet Insurance products, however the new service will include lost data for all RAC customers. In order to recover lost data, an owner would need to send a copy of their pet's registration document and a proof of ownership document to their nearest RAC Pet Supplies centre. They will then be able to recover the lost information on their pet, once a scan of the documents have been confirmed by the centre. Planned for completion in mid-2010, the RAC Pet Supplies will be a satellite centre with support from RAC's regional centres, built with families who need to access pet services close to home. Pet owners should visit www.pet.rac.co.uk/lost-data-recovery and follow the simple instructions to get their data back, also for lost details of other RAC products.

Q: AngularJS custom filter for Arrays object I'm trying to create my own custom filter in AngularJS using the code below but for some reason it is not working. `module.filter('unique', function(){ return function(array, key){ if(!array || array.length === 0){ return array; } array.sort(function(e1, e2){ return e2[key] - e1[key]; }); var result`

Water transport, which is a reaction type exchange between the solid surface and the aqueous solution, includes both the water flux between the solid surface and the aqueous solution (i.e., the permeability) and the water distribution within the solid. The former requires the outer-surface moisture to be expelled and then the moisture to be allowed to pass through the outer-surface layers of the solid to reach the inner-surface in order to react (i.e., the internal porosity of the solid). The kinetics of the reaction depends on the amount of moisture available to react with the reactant (i.e., molecular mobility). The latter is primarily in the form of hydraulic conductivity. There are situations when the above-stated exchange cannot or should not occur, such as the protection of valuable containers or materials, such as food products, raw materials and pharmaceuticals. For example, if an outer layer of a container is to be coated with a food product, direct contact of the outer surface of the container with the food product could cause undesirable results. Conventional methods to coat food products include, for example, dipping, spraying and brushing a food product onto an already coated container. In most cases, the coated container is moved relative to the food product in order to coat the food product. However, when coating a liquid, movement of the container may cause the liquid to move away from the coated surface of the container. In the case of a container containing a liquid food product, the exchange of the liquid between the container and the ambient environment is via an uncontrolled and uncontrollable process through the ruptured or rupturing walls of the container. The expected direct contact of the liquid and air creates conditions that permit the liquid to rapidly be dispersed (e.g., in the form of a spray) onto the surface to be coated. Further, when spray coating, the desired and expected reaction of the liquid and air will require the pressure of the liquid to be greater than the ambient pressure, which requires that the air is exhausted from the container. As a result, the possibility for escape of the air from the container becomes much more likely. In addition, the practice of directly spraying a liquid onto a food product has numerous negative consequences. For example, many food products when sprayed will become contaminated with bacteria or other contaminants as a result of splashing. Further, many sprayed liquids will adhere to the sprayed coating in a way that makes the coated surface very difficult to clean. One solution to avoid the problem is to
